Series 1. Soil Characterization – 500 g sample minimum
 pH, % organic matter, cation exchange capacity, field capacity @ 1/3 bar, permanent wilting point @ 15 bar, % sand-silt-clay, texture, bulk density, % total nitrogen, phosphorus and soluble salts.

Series 2. Soil Characterization – 500 g sample minimum
 pH, % organic matter, cation exchange capacity, field capacity @ 1/3 bar, % sand-silt-clay, texture, and bulk density.

Series 3. Water Characterization – 500 ml sample minimum
 pH, calcium, magnesium, sodium, hardness, conductivity, sodium adsorption ratio, total dissolved solids and turbidity.

Series 4. Water Characterization – 500 ml sample minimum
 pH, calcium, magnesium, sodium, hardness, sodium adsorption ratio and conductivity.

Additional analysis on back

GLP Characterization Analysis Available

Chemical and Physical Properties of Soil

- Soil pH (1:1 Soil/Water)
- Soil pH (KCl)
- Soil pH (CaCl₂)
- Soil pH (Saturated Paste)
- Organic Matter (Walkley Black)
- Organic Matter (Loss on Ignition)
- Organic Carbon (Walkley Black)
- Organic Carbon (Combustion)
- Inorganic Matter
- Cation Exchange Capacity (Ca, Mg, Na, K, H by summation)
- Cation Exchange Capacity (by Sodium Saturation)
- Cation Exchange Capacity (by Ammoniacal Displacement)
- Bulk Density (Disturbed)
- Bulk Density (Undisturbed Cores)
- Porosity/Particle Density
- Volatile Solids
- Sand, Silt and Clay (Hydrometer)
- Sand, Silt and Clay (Hydrometer & Sieving)
- Sand, Silt and Clay (Pipette and Sieving)
- % Gravel
- Sand Size
- USDA Textural Class
- International Textural Class
- ADAS Textural Class
- W. German BBA Textural Class
- Soil Color
- Water Holding Capacity (Specify: _____)
- Water Holding Capacity (0 Bar)
- Water Holding Capacity (1cm)
- Undisturbed Water Holding (0.1 to 15 Bar)
- Nitrogen (Total Kjeldahl)
- Nitrogen (Ammoniacal-N)
- Nitrogen (Nitrate-N)
- Nitrogen (Nitrite-N)
- Total Phosphorus
- Phosphorus (Olsen)
- Phosphorus (Bray)
- Soluble Salts
- Carbonates
- Redox Potential
- Zinc (DTPA)
- Iron (DTPA)
- Manganese (DTPA)
- Copper (DTPA)
- Sulfate Sulfur
- Anion Exchange Capacity

Water Relationships

- Saturated Hydraulic Conductivity
- Moisture Percent
- Water Infiltration Rate

Biological Properties

- Microbial Biomass Carbon
- Total Plate Count (Fungi, Bacteria, and Actinomycetes)

Additional Procedures

- Disposal of Foreign Samples
- Rush analysis available

Water Characterization Parameters Available

- Series 5:** pH, calcium, magnesium, sodium, hardness, sodium adsorption ratio, conductivity, potassium, carbonate, bicarbonate, nitrate, sulfate, chloride and alkalinity.
- Series 6:** pH, calcium, magnesium, sodium, hardness, sodium adsorption ratio, conductivity, potassium, carbonate, bicarbonate, nitrate, sulfate, chloride, turbidity, total dissolved solids and alkalinity.
- Water pH
- Calcium
- Magnesium
- Sodium
- Hardness
- Conductivity
- Sodium Adsorption Ratio (SAR)
- Total Dissolved Solids
- Turbidity
- Alkalinity
- Chemical Oxygen Demand
- Specific Gravity
- Redox Potential
- Total Organic Carbon
- Dissolved Organic Carbon
- Carbonates
- Bicarbonates
- Sulfate-Sulfur
- Nitrogen (Total Kjeldahl)
- Nitrogen (Ammoniacal-N)
- Nitrogen (Nitrate-N)
- Nitrogen (Nitrite-N)
- Suspended Solids
- Dissolved Oxygen
- Total Phosphorus
- Potassium
- Zinc
- Iron
- Manganese
- Copper
- Boron
- Chloride
- Fluoride
- Bromide
