<input type="checkbox"/> Bill account	
<i>SD Residents: Do not include payment. You will be invoiced separately to include appropriate SD Sales and Use Tax.</i>	

How to collect a soil sample for lawns and gardens

- 1. Collect a soil sample from the 0-6 inch soil depth. Use a soil probe or garden shovel/trowel to collect a small scoop of soil.**
 - Scrape away surface litter, grass, or leaves. Remove any stones.
- 2. Repeat this in 4-6 locations for small lawns and gardens or 12-15 locations for large lawns and gardens.**
 - Collect soil samples from similar areas (appearance, topography, and use).
 - Collect the same amount of soil from each location.
 - Problem areas for troubleshooting should be sampled separately.
- 3. Mix all samples together thoroughly in a clean bucket and transfer to soil sample bag.**
 - Measure about 2 cups of soil.
 - Label soil bag clearly with sample ID.
- 4. Ship soil sample to AGVISE with submission form and payment in mailer or box.**
 - Do not place paperwork or payment in soil bag (paper can get soggy). Use a new submission form for each soil sample.
 - *Important: Refrigerate soil sample if shipping will be delayed more than one day.*
